

FUSION Transform

Receive documents from outside sources into your Fusion Text system for automatic processing.

No special software or licenses are required for your outside agency or service.

Integrate ADT into the header automatically when exact patient information is supplied.

Report on all the details of your outside work including detailed production reports providing report count and lines.

Verify and match documents and billing received against your own line count meters and report details.

Integrate External Documents

Many require the assistance of an outside transcription agency to transcription. With FUSION Transform you can merge these documents with the reports you create in-house to capture the advantage of your distribution and reporting rules including printing, HIS uploading, faxing, and report archival.

Easy Implementation

FUSION Transform affords the flexibility of incorporating a variety of document formats without your transcription agency purchasing any additional software. Modem or transmit reports in real-time or batch into the system for automatic processing. FUSION Transform reformats the document into the facility defined document and processes the document as if it were transcribed in-house.

HIS Demographic Integration

If you have an interface to your ADT system for report demographics, FUSION Transform will automatically verify and match supplied demographics with your HIS ADT information. If exact matches cannot be made, a log is created for clerical attention.

Report Storage and Management

Once Transformed, the new document is treated as if it were generated in-house. Printing, faxing, emailing, HIS uploading and other automatic features apply. Use the FUSION Billing feature to count the lines and verify the accounting details of your outsourcing bills.
