

WAYS WE IMPROVE THE TRANSCRIPTION PROCESS

Because no Hospital typing package interfaces with dictation, transcriptionist must read information of the dictated voice file or listen to the information. The following is a list of information REQUIRED to start transcribing the document.

1. Physician dictating name and/or physician number.
2. Date and time of dictation.
3. Work type to pull up correct template.
4. Patient number to search Hospital information system for patient info.

To retrieve this information and to enter it manually into your Hospital system and select these choices in the current typing package is a minimum of 2-5 minutes per report just to start typing the actual dictation.

This is all automatic with Fusion Text[®]. You are instantly ready to transcribe what the Physician is dictating.

With our Product we incorporate a Medical Speed Typing Program as well as Routings that Physicians use consistently throughout their dictation that the transcriptionist doesn't have to type over and over. As well as:

1. Auto naming of Report by multiple fields.
2. Automated printing, collating and sorting of Reports.
3. Automated faxing and emailing of Reports.
4. Automated Reports on turnaround production line count and much more. Saving as much as 3-5 minutes per report finishing these steps manually.
5. You can add Background Speech Recognition at any time in the future and save even more time.

Let us do a survey of your current transcription process and justify how it's costing you more not to have a system that automates all the manual processing and stops your staff from being as productive as they could be.
